**DETAILED ACTION**

***Response to Arguments***

Applicant's arguments with respect to claim14-15 have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**Claim14-15** rejected under 35 U.S.C. 103 (a) as being unpatentable over Kudou (Pub No US 2002/0003837) in view of Kandlur et al (Patent No. US 5,742,347).

Regarding claim14, 15 Kudou teaches an encoder, comprising: a determining unit configured to receive a first picture type, wherein the first picture type is used to set a bit rate corresponding to size information of the first picture type (see paragraph 0046) but does not teach an encoding unit for converting a second picture type into the first picture type using the set bit rate. However Kandlur teaches converting a second picture type into the first picture type with a given bit rate (see column5 line 13-23).

One of ordinary skill in the art at the time the invention was made would have been motivated to convert first picture type to a second picture type as in Kandlur in to

Kudou because it would make interactive playback much effective (see Kandlur column2 line59-62).

Therefore, the invention as a whole would have been prima facie obvious to one of ordinary skill in the art at the time the invention was made, absent unexpected results to the contrary.

***Allowable Subject Matter***

Claim16 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

**Claim1-13 and 17-22 are allowed.**

The following is a statement of reasons for the indication of allowable subject matter: The present invention directed to an apparatus for controlling a bit rate during reverse play of a digital video stream. The independent claims identify uniquely distinct feature "...determining a bit rate using size information from an intra-coded picture of a first subgroup of pictures in the group of pictures received from the sorting unit, and setting bit rates of next subgroups of pictures using the determined bit rate" The closest prior art Kandlur et al (Patent Number US 5,742,347) either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
